

Firmware Revision Notice Version 2.32

This is to announce that new firmware—version 2.32—is available for the Sound Devices 970 audio recorder and the Video Devices PIX video decks: PIX 270i, PIX 250i, and PIX 260i. This announcement provides a brief listing of any new features and changes that have become available after the product user guides were published. Fixes are detailed on the download webpage.

For more information, visit the web links below.

New Features

This section provides information on new features. Not all features apply to every PIX recorder. The products to which a feature applies are provided in brackets beside each header.

Support for Dante v3.10 [970, PIX 260i, PIX 270i]

This version of firmware supports Dante Device Lock via Dante Controller.

If Dante Controller is used to lock a device, the 970 audio deck or PIX 260i and PIX 270i video decks will detect and display a locked message when Dante is selected as the Input Source on the Audio Screen.

Additional details regarding this firmware release is available online from the Sound Devices and Video Devices websites. Get product documentation and firmware at:
